DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-16, 22-32, and 42, drawn to figures 9 and 13 that depict a method for determining modem transmission constellations, classified in class 375, subclasses 222 and 243.
- II. Claims 17-21 and 33-41, drawn to figures 10 and 12 that depict a method for detecting a modem, classified in class 375, subclass 377.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination of transforming a signal clearly only relies on the fact that a modem is properly detected, not how the modem is detected. The subcombination has separate utility such as a modem detector within an echo canceller. It is well understood that echo cancellers interfere with modem transmissions and need to be disabled upon detection of a modem transmission, therefore, the method and apparatus for detecting a modem is directly applicable.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
